

ZACH ALLEN

He/Him

IMPACT & EXPERIENCE

Software Engineer at Pluton Biosciences

2021-03 - 2021-08

Data Engineering and Cloud Infrastructure supporting Bioinformatics & Genomics research

- **AWS Genomics Pipeline**
Terabyte-scale AWS genomics pipeline to meet rapidly growing startup needs
 - Ensured strong integration between pipeline components with an in-house gRPC+ProtoBuf pipeline architecture, built for LIMS/metadata integration from the ground-up.
 - Demonstrated experience using CS to meet business needs: Developed simple Python+R framework enabling non-CS teammates to deploy large-scale genomic analysis queries, without 'blocking on' the bottlenecked CS team.
- **Containerized Deployment & Autoscaling**
Researched, containerized, documented, and deployed 10+ Computational Genomics tools to AWS ECS and EC2
 - Leveraged experience in Docker and Kubernetes to streamline & automate containerization workflow for Computational Genomics tools, turning user requests into production tools in as little as 6h.
- Worked closely with SMEs to perform statistical analysis and visualization of microbial taxonomy data in R.

Machine Learning Researcher (Intern)

2017-01 - 2017-05

at Pacific Northwest National Laboratory

ML Research and Data Engineering

- Designed and tested novel Neural Network algorithms, architectures, and error formulations for NLP, image classification, and time-series data classification.
- Demonstrated increased test accuracy (15% → 90% detection with higher Bayesian Confidence) on unbalanced (>1000:1) datasets for network insider threat detection, without duplication, augmentation, or batch filtering.

EDUCATION

Bachelor's in Computer Science

2019-02 - 2022-08

at Western Governors University

Focused on Machine Learning and Project Management in a fully remote environment

- **Diamond Price Prediction Model** [link](#)
End-to-End ML Model development and documentation for a mock gemstone marketplace
 - Researched & analyzed opportunities to integrate Machine Learning with existing infrastructure, merging technical requirements and business needs.
 - Rapidly prototyped Python data pipeline in Numpy/Pandas and ML model in SciPy, demonstrating project validity quickly at least expense.
- **Advanced Java Concepts** [link](#)
Developed appointment scheduling and customer database tool in Java

SUMMARY

Machine Learning Researcher & Data Engineer with 5 years experience in collaborative AI innovation & infrastructure implementation at scale. Expert in Python & TensorFlow since 2015/2017. Passionate about working closely with multidisciplinary partners to shape the future towards global sustainability. Excellent writing, speaking, presenting, and technical communication skills.

PROJECTS

Neural Cellular Segmentation [link](#)

Exploring neural cellular automata and attention (NCA+A) for medical image segmentation in TensorFlow

- Developed, tested, and iterated NCA+A models in TensorFlow, balancing system resources and model size.
- Created multiple tf.Data pipelines with preprocessing and data augmentation steps.

Interplan [link](#)

Task dependency management from a Graph Database

- Developed a Neo4J+JS dependency resolution and task status tracking API.
- Packaged Node+Neo4J in Docker & Kubernetes for easy migration.
